

Global Abortion Policies Database

(<http://srhr.org/abortion-policies/>)

Introduction:

The Global Abortion Policies Database is designed to strengthen global efforts to eliminate unsafe abortion by producing an interactive open-access database and repository of current abortion laws, policies, and national standards and guidelines. This tool builds upon the UNPD's previous work in this area, resulting in a more comprehensive information resource on abortion policies in the 21st century. The database will facilitate analyses of countries' abortion laws and policies when they are placed in the context of WHO guidelines and human rights norms and standards. It is intended to help states identify and eliminate the barriers that women encounter in accessing safe abortion services. It is also intended to increase both the transparency of abortion laws and policies and to ensure accountability for the protection of women's health and their human rights.
